### Construction Notes & Permitted Modifications

This was primarily a development of the original W series Westwood and looks similar in overall appearance. Generally the materials are of heavier gauge than the W series machines and engines were larger in this series.

In order to achieve the appropriate height from underside of seat to centre line of rear axle the minimum amount of metal-work may be removed to accommodate this. Note should be made that excessive removal of material in any area will require replacement at the discretion of the race committee / scrutineer.
